Dear Sir/Ms,

Many thanks for the update!!!

Currently we have already launch several wifi 6e sku in US, Korea & worldwide, e.g. GT-AXE11000, Zenwif ET8, GT-AXE16000 & Zenwif ET12 fyr

Regarding to the limitation of 5925-6425 MHz band, 6E performance will be significantly affected (e.g. TX Sharper, TDCS, AX OFDMA, providing wider coverage and higher speed even in long range distance, we will integrate them as our own feature "RangeBoost")

From our HQ, ETSI EN301 893 draft 2.0 undergoing 5725 MHz~5850MHz band open for indoor and outdoor use. EIRP 23dBm. DFS is required.

We would like to know more details for the regulation in order to get our sku ready for future testing, many thanks!!!

- Target period of submission samples
- Licence is required only for vendors products? How about distribution/resellers
- Once hv FW update, does it need to retest or self-declared?
- USB receiver, M.2 PCIE received, PCIE wireless receiver is excluded or not

Many thanks!!!
